

High Speed Data Acquisition System

DAS1700

The DAS1700 high speed, configurable data acquisition system combines a fast sampling rate, deep memory, and a large touch screen display. The system also includes built-in software tools for power analysis and a mathematical function editor for performing calculations between multiple channels. This recorder supports two acquisition modes, File mode and Memory mode. File mode is suitable for acquiring data over long periods, during which the instrument records measurement data directly to the hard drive. Memory mode is used for capturing transient data on 36 channels simultaneously at a maximum rate of 1 MSa/s.

The acquisition system can accommodate 4 types of measurement boards with 6 or 12 channels each and is able to measure voltage up to 1000 V RMS, current, temperature and strain gauge. Optional CAN and LIN inputs further extend the ability of this recorder.

Choose any combination of 3 boards, or add the extension module to install up to 6 boards for applications ranging from small sensor signal logging to electrical power analysis.

Applications

- Measure signals ranging from strain gauge signals to large electrical systems
- Maintenance and failure analysis
- Power analysis of single and three phase systems

4 measurement board types

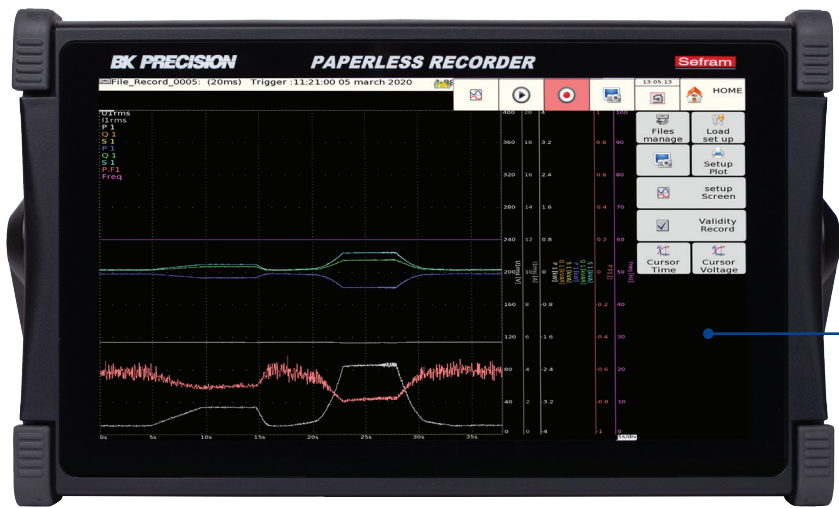

- Universal input (6 channels)
- High voltage (6 channels)
- Multiplexed (12 channels)
- Strain gauge (6 channels)

The logic channel module allows the acquisition of 16 logic channels and discrete output of 3 alarms that can be controlled by a combination of logic channels or analog signals with thresholds. These alarms can control indicators or small relays. The advanced triggering system can be combined with analog channels, alarms and logic channels to start or stop the recording and send alarm notifications locally or by email.
