

#### PCR-LE/LE2 SERI

## **High-performance multifunctional AC Power Supplies** PCR-LE/LE2 Series

Capable of various power line abnormality simulations and the sequence operation Single phase 500 VA to 9 kVA/Single phase & three-phase 6 kVA, 9 kVA, 12 kVA, 18 kVA, 27 kVA, Supporting the system for the single-phase, and expandable with optional drivers for the single-phase three-wire, and three-phase operation.

Expandable capacity up to 27 kVA (single-phase), 54 kVA (single-phase three-line), and 81 kVA (three-phase) Features a full range of measuring functions and supports AC, DC, and AC + DC Outputs Detachable front panel

Eco-friendly function equipped

RS-232C as a standard interface, and GPIB, USB, and LAN (LNI) are available as an optional interface.

# New stage of AC power supply supporting new energy field

## High-performance AC Power Supplies PCR-LE SERIES

The PCR-LE Series is a new line of advanced multifunctional AC power supply that has been developed from our PCR-L/LA Series (linear amplifier type).

The PCR-LE Series provides high reliability and can be applied to various applications, by taking advantage of the features that can control broadband waveform freely. Moreover, the PCR-LE Series can be configured as a core device of a test system combined with E-loads and Power Analyzers for "Grid Connection Testing" in regard to dispersed power generation, such as Solar Power, Wind Power, Fuel Cell, and Gas Engine referred to as "New Energy Field". With various options, the low frequency immunity test and various power environment tests are supported. The options for parallel operation and three-phase operation enable you to expand a single-phase system up-to 27 kVA, single-phase three wires up-to 54 kVA, and a three-phase system up to 81 kVA. The system can be applied to a large-scale EMC site for testing of industrial high-capacity air conditioners.

#### [Applications]

- Research & Development

  Proof evaluation for power supply abnormality FMC testi
- Adjustment & Inspection Lines

  Power supply voltage margin check, Automated inspection system
- Production Lines
  For stabilizing the line power supply, Automated testing system
- Quality Assurance
  IE ard Testing
- After-Sales Service
  As power supply for repair and calibration
  To reproduce power line abnormalities

4 kVA

3 kVA

The linear amplifier type realizes high stability and high quality output and supports a wide range of functions from R&D to manufacturing/inspection lines and servicing.

#### What is a linear amplifier type?

Firstly, the input power is converted to DC power by a rectifier circuit, then it supplies the power as the linear amplifier.

A sine wave reference voltage is created by such a crystal oscillator, and it is used as input into the linear amplifier, where the power amplification is performed to generate the output power.

In addition to its high-speed response characteristics, because the output voltage and frequency can be changed whenever necessary, this system can be used to conduct simulations of power line abnormalities (such as instantaneous power interruption tests), and also it can be applied to the testing of ATE and other purposes.

#### What is a PWM inverter?

This type uses a PWM (Pulse Width Modulation) switching-type DC/AC inverter which is placed as a part instead of the linear amplifier. Because this is a switching type, it cannot provide feedback over a wide range while the linear amplifier can. As a result, the output quality and response gets inferior, and noise becomes larger, compared to the linear amplifier type.

However it has the advantages of being smaller and more efficient than the linear amplifier type, and is also pulling attention as a high-performance AC power supply for energy-saving purposes.

- Evaluation for the immunity of power abnormalities.
- Capable of DC output.
- Easily conducting power measurement.
- Can be used in anechoic chambers and shield rooms.

The PCR-LE Series has equipped with the measurement functions built into the main unit, it can be used not only for voltage and current measurement, but also for convenient measurement of apparent and effective power, inrush (peak) current, power factor, high-frequency current, and other values. Furthermore,it is capable to conduct such as power line abnormality simulations, sequencing functions, and arbitrary waveform generation also provide a dramatic improvement in data reproducibility and reliability when evaluating immunity to instantaneous power interruptions, voltage fluctuations, frequency fluctuations, missing phase, and other power line abnormalities. In addition, the PCR-LE has maximum DC output of  $\pm 424$  V. This is extremely convenient when a slight DC output is required in case driving a DC/DC converter. The PCR-LE Series can also be used as AC power sources in various EMC test sites (anechoic chambers, shield rooms, etc.).

\* Use of the arbitrary waveform generation function and other functions requires separate application software SD011-PCR-LE (Wavy for PCR-LE).

- Use as a CVCF power supply.
- Stabilization of the power line.

With the PCR-LE Series, it can be used as a CVCF power supply to handle worldwide commercial power (100 V - 240 V), as well as for marine and aircraft power (400 Hz). It can supply a maximum output peak current up to 4 times the rating (rms) with a capacitor input load (both peak value and continuous supply), or approximately 2 times the rating (rms) for motors and other loads with large in-rush currents (peak value, approximately 10 seconds\*, when power factor is 1). The PCR-LE Series is also recommended for power stabilization when using precision machining systems, measurement systems, and others where the voltage abnormalities becomes an issue. With an output voltage response speed of 30 µs (standard value) and a waveform distortion factor of 0.3 % or less, the PCR-LE Series provides extremely high speed and high quality that are particularly effective with systems such as welders and semiconductor manufacturing equipment where even slight power fluctuations or load fluctuations can affect quality and accuracy.

\*Output shuts off after 10 seconds.

Waveform distortion occurs if the current exceeds the rating anytime during the period of 10 seconds.

For Adjustment and Inspection lines:

- To confirm the power voltage margin.
- Use in automated inspection systems.

The PCR-LE Series can be used for operation checks of the power voltage range, and as a power supply for aging. Multiple units of the PCR-LE Series can be connected in parallel to boost capacity, and can also be connected in 3 phases, allowing flexible adaptation to line changes or the number of aging units. Remote control and monitoring from a PC is also supported using the GPIB or RS-232C communication or USB or LAN interface, and it can be used for management of inspection records and other quality data as well.

\* The GPIB, USB, and LAN are available as an interface option.

#### For Quality Assurance:

- Use as a standard room power supply.
- Conducting of IEC standard tests.

The PCR-LE Series can be used as a power supply in standard rooms and measurement device management rooms.

#### For After-sales service:

- Use as a power supply for repairs and calibration.
- Reproduction of power abnormalities.

The PCR-LE Series can also make a large contribution to repairs, inspections, calibration, and other servicing work. For example, the PCR500LE (output capacity 500 VA) allows worldwide commercial power (100 V - 240 V) to be supplied from a household electrical outlet (100 V, 15 A). This is highly recommended for servicing sites where large equipment cannot be installed and it also can be used for the field service. Since the PCR-LE Series can supply clean power that is free of fluctuation or distortion for inspection and calibration work, it can help to maintain and improve quality of service.

## features

#### **Extended system for large capacity applications. Flexible configuration in models.**

It is possible to expand to 27 kVA (single phase), 54 kVA (single phase 3-wire), and 81 kVA (three phase) by using the parallel, single phase 3-wire, and three phase operation options (expansion operation drivers). This allows the system to be used for large-scale EMC site power or as test power for large-capacity industrial air conditioners.

#### ■Extensive configuration of the system.

Each unit can be used as either a master or slave, allowing units to be individual or system depends on the requirement.

- Parallel operation \*The separately-sold expansion operation driver is required.

  Can be expanded to 54 kVA (single phase 3-wire) or 81 kVA (three phase) when used in combination with the single phase 3-wire option or three phase option.
- ★ Combinations of different models are possible! Example: PCR2000LE + PCR4000LE + PCR6000LE = Single phase 12 kVA

#### ■ Single phase 3-wire, three phase operation

- \* The separately-sold expansion operation driver is required.
   All models / Max. expanded capacity: 54 kVA (single phase 3-wire),
   81 kVA (three phase)
- When used in combination with the parallel operation option
- ★ Combinations of different models are possible!

  Example:PCR2000LE + PCR2000LE + PCR4000LE = 6kVA "Three-phase" or 8kVA
  "Unbalanced Three-phase"

\*8kVA when used in the "Unbalanced Three-phase"

#### For testing of the "Grid connected system" with reverse load flow

Conforming to the guideline of the Japanese standard requirements of system interconnection technologies

#### Eco-friendly function (Energy-saving function)

#### ■ Sleep function

The power unit goes into the sleep mode when no output is detected for a specified period to save the power consumption.

#### PCR4000LE

■ Energy-saving operation function\* You can utilize the energy-saving function to operate only the number of power unit(s) depending on the required supply load.

[Example] Operation with a 4 kVA model when 1 kVA is necessary

#### PCR4000LE

#### Unit structure allows easy maintenance.

Maintenance (replacement or other work) on the power unit can be performed in 1 KVA units. \*Excepting PCR500LE

#### Downsizing

Comparison with the former model PCR-LA (4 kVA)

| Model     | Dimensions (mm(inches))                             | Weight              |
|-----------|---|---------------------|
| PCR4000LE | 445 (17.52") W×785 (30.91") H<br>×595 (23.43") D mm | 96 kg (211.64 lbs)  |
| PCR4000LA | 455 (17.91") W×920 (36.22") H<br>×605 (23.82") D mm | 120 kg (264.55 lbs) |

#### Input/output terminal block tray for easy connections

The rear input/output terminal block tray is a slide-out type, allowing input/output cables to be connected easily. (Excepting the PCR500LE and PCR12000LE2 and PCR18000LE2 and PCR27000LE2)

When terminal block tray slides out se the terminal block tray is not returned into the storage compartment the PCR-LE2 can not be operated even if the power switch is turned on.

#### ■ Wide-ranging specs DC output also supported

| Item               | Range  |  |  |
|--------------------|--|--|--|
| Voltage (AC)       | 1V to 150 V (L range), 2V to 300V(H range)         |  |  |
| Frequency          | 1Hz to 999.9 Hz *1                                 |  |  |
| Voltage (DC/AC+DC) | 1.4 V to 212 V (L range), 2.8 V to 424 V (H range) |  |  |

<sup>\*1:</sup>The frequency is limited to the range from 1 Hz to 500.0 Hz when the 3P05-PCR-LE(500Hz LMT) is installed in the PCR-LE series

In addition, the system supports a DC output mode and AC + DC output mode. The system can be useful in a wider range of fields such as chemistry- and physics-related areas.

#### Selectable response mode

Allows select of a response mode for the internal amplifier system depending on the load condition and application.

| Item                          | Application                                   |
|-------------------------------|---|
| High-speed response (FAST)*2  | for requesting a rate of power rise/fall      |
| Normal response (MEDIUM)      | for testing various power supply environments |
| Highly stable response (SLOW) | for power supply for EMC testing sites        |

<sup>\*2 ·</sup> Excluding PCB6000LE\_PCB9000LE\_PCB6000LE2\_PCB9000LE2\_PCB12000LE2 PCR18000LE2.PCR27000LE2, three phase operation, parallel operation

#### Power line abnormality simulation

In AC mode, it is possible to simulate power line abnormalities by setting the output of the PCR-LE series system to the state of a power outage. voltage drop (dip), or voltage increase (pop). This allows the ability to test switching power supplies and electronic equipment.

power outage

voltage increase (pop)

voltage drop (dip)

#### **External communication interface. Complied to LXI.**

RS232C (equipped as a standard). Remote control available with GPIB, USB, and LAN as options. Using LAN makes it possible to configure highly cost-effective systems, as LXI standard is supported.

#### Other functions

- Various measuring functions
- Sequence function
- Sensing
- Regulation adjustment
- Output current control
- Setting output impedance
- Measuring harmonics current
- Soft start (Rise time control)
- Internally fixed Vcc
- Control panel angle adjustment

## performance

#### [Example of single phase 3-wire 4 kVA system]

#### Example of single phase 3-wire system configuration

| Capacity                   | Model     | Qty | Single-phase three-wire driver | Qty |
|----------------------------|-----------|-----|--------------------------------|-----|
| Single phase 3-wire 1 kVA  | PCR500LE  | 2   | 2P05-PCR-LE                    | 1   |
| Single phase 3-wire 2 kVA  | PCR1000LE | 2   | 2P05-PCR-LE                    | 1   |
| Single phase 3-wire 4 kVA  | PCR2000LE | 2   | 2P05-PCR-LE                    | 1   |
| Single phase 3-wire 6 kVA  | PCR3000LE | 2   | 2P05-PCR-LE                    | 1   |
| Single phase 3-wire 8 kVA  | PCR4000LE | 2   | 2P05-PCR-LE                    | 1   |

## applications

#### For testing of the Smart Grid related applications

Storage Battery for Residential use (DUT)

EV charge and discharge station (DUT)

#### For testing of the Smart Grid related applications

Smart meter (DUT)

## applications

#### For Standard Compliance testing

This system can simulate various conditions of phenomena occurring in AC power environments. It can be used for immunity tests of electrical and electronic devices which are connected to a low-voltage distribution system, or which have DC power input ports, under the standard conditions as specified on the right. The test conditions can be set outside the standard range, allowing the system to be used for preliminary tests prior to standard tests, immunity margin tests, and stress tests. The KHA3000 harmonic/flicker analyzer combines a PCR-LE Series AC power supply, LIN Series line impedance network, and application software\*, allowing tests which conform to IEC standards and JIS standards.

\*SD009-PCR-LE [Quick Immunity Sequencer 2] is required. (See P. 16.)

## IEC Dip · Simulator DSI Series [DSI1020/DSI3020]

## For the Voltage dips, short interruptions and voltage variations immunity test system, complied to the IEC61000-4-11 (2004)

The DSI Series is an option unit used to configure the test system complying with the "Voltage Dips, Short Interruptions and Voltage Variations Immunity Tests" as defined in the IEC61000-4-11 (2004) standard. It can be used in combination with the Kikusui AC power supplies (PCR-LE/LE2 series). It meets the test requirement of : high-speed voltage switching (rise time: 1  $\mu$  s to 5  $\mu$  s), voltage dips (0 %, 40 %, 70 %, and 80 %), and phase-voltage and line-voltage tests.

■ DSI1020: Applied to the Single-phase two-wire system

■ DSI3020: Applied to the Single-phase two-wire, Single-phase three-wire, Three-phase three-wire, and Three-phase four-wire system.

Fast Votage rise/fall time (1 us to 5 us)

▶ Applied to the voltage dips (0 %, 40 %, 70 %, and 80 %)

▶ Applied to the Line Voltage-dip\* and the Phase Voltage-dip

► Maximum Line Input voltage 500 V (rms)

\*The Line Voltage-dip applied to only the "DSI3020".

When connecting the DSI Series with the PCR-LE Series, the output capacity of the AC power supply of each phase will be limited. For details, please refer to the individual product brochure or ask for the local distributor.

#### **Line Impedance Network**

## $LIN\ Series\ {\tiny [LIN1020JF/LIN3020JF/LIN3060J/OP01-LIN1020JF]}$

#### It is equipped with the IEC/JIS/JET standard impedance. It supports voltage fluctuation and flicker tests.

#### ■ LIN1020JF

LIN1020JF is equipped with the impedance determined by the IEC flicker test (IEC61000-3-3) and JIS harmonics (JIS C61000-3-2), which can be configured via the USB interface (standard feature) or the contact signal interface from the application software. The single-phase two-wire IEC flicker/harmonics test system can be configured in combination with AC power supply PCR-LE/LE2 and harmonic flicker analyzer KHA1000/KHA3000.

#### **■ LIN3020JF**

LIN3020JF is equipped with the impedance determined by the IEC flicker test (IEC61000-3-3) and JIS harmonics (JIS C61000-3-2), which can be configured via the USB interface (standard feature) or the contact signal interface from the application software. The single-phase two-wire/three-wire/three-phase IEC flicker/harmonics test systems can be configured in combination with AC power supply PCR-LE/LE2 and harmonics flicker analyzer KHA1000/KHA3000.

#### ■ OP01-LIN1020JF

OP01-LIN1020JF is an additional unit that is used to expand LIN1020JF in three phases (addition of V phase and W phase).

#### **■ LIN3060J**

LIN3060J

LIN3060J is equipped with the impedance established in the JIS/JET standard that is required in the test for the grid-connected power conditioner. This is the standard impedance unit that is indispensable to the construction of the system for the grid connection test of JETGR0002-1-2.0.

\* Note that this is not applicable to the IEC flicker test. Contact us for a product that is compliant with IEC61000-3-11

## options

#### [Caution] For customers using the former PCR-L/LA Series

Please be aware that the PCR-LE Series is not interchangeable with the former PCR-L/LA Series of products. Therefore it is not possible to upgrade a system with a combination of products from the two different series'. In general (with some exceptions) the options from one series cannot be used in the other. If there are any unclear points or for other details, please contact a Kikusui sales office.

#### Application software

\* For details, please see the Kikusui homepage.

#### The latest standards for IEC61000-4 supported!

"Quick Immunity Sequencer 2" (model name: SD009-PCR-LE) is an application software for immunity testing with the AC power supply PCR-LE series system, based on the power line disturbance standard (IEC61000-4 Series) for the immunity testing of the EMC standard.

Not only can it be used for compliance testing based on the latest standards or for some types of preliminary testing, but the software can be also employed for advance checking in development phases and for immunity margin tests, because it allows extended testing conditions to be set as needed.

Remote control software for the Windows tablet

## 21–PCR–LE[ RMT CONT SOFTWARE FOR PCR-LE]

#### The Windows tablet can be used as a remote controller!

The SD021-PCR-LE is the software that can control the PCR-LE/LE2 Series. It is capable to change the setting condition of the "wiring method", "output mode", "voltage range", "voltage value", and "frequency value". And these settings changed by the remote controller can be saved and recalled. Moreover, it can display the measurement value of the AC power supply. The remote operation and control of the AC power supply from the distance can be easily realized.

 Operating Environment: Intel Core 2 or later / Windows 8.1 / Memory 4GB / Storage 128GB / Display resolution 133 x 768 or higher / USB port

\*The LAN cable, LAN adaptor (micro USB to the wired LAN), the optional LAN board (LN05-PCR-LE) are required.

Screen display (main screen)

<sup>\*</sup>Immunity testing for units with 16 A/phase except for those required by IEC61000-4-34

\*1 Capability of rapid change with 1 µs to 5 µs is required for 110 %, 95.2 %, 93.5 %, 90 %, 87 %, 80 %, 74 %, 71 %, 66 %.

Preliminary test is capable since the voltage response of the PCR-LE/LE2 is 20 µs in FAST mode and 30 µs in MEDIUM mode.

\*2 The device between the range of 16A to 75A requires to have the capability of rapid change with 1 µs to 5 µs.

The device exceeding 75A does not require to have the capability of rapid change with 1 µs to 5 µs.

(It is relaxed to 1 µs to 50 µs for the device exceeding 75 A)

#### Application software

"Wavy" sequence creation software

## SD011-PCR-LE[Wavy for PCR-LE]

## The software extends the feature of waveform generation and sequence functions. Easy sequence control without programming knowledge.

Wavy is an application software that supports sequence creation and the operation for Kikusui power supplies and electronic loads.

Wavy allows you to create and edit sequences visually with a mouse without programming knowledge. Real-time monitor function is added to the Ver. 4.0 or later, that enables monitoring and logging values of voltage and current. The Ver.5.0 equips Remote Control Panel function that enables you to control power supplies as if you were using a remote controller.

- It makes you easier to create or edit the test condition file required for the sequence operation.
- By using the storage function of test condition data file, it enables you to manage the test condition of the standard routine test.
- The progress of execution sequence will be displayed on the "practical dialogue" with the setting value and the cursor.
- It is possible to observe the intuitionistic output through by the "monitor graph" that plots the ongoing monitor value.
- You can save the acquired monitor data as a test result.
- Added the "waveform image" window. You can easily keep track of the AC signal.
- Allows you to edit and create the new arbitrary waveform easily. You can instantly write then output the created arbitrary waveform.
- Supports the status of description of sequence step for "selected" or "not selected". It enables you to select depends on the requirement such as the "pausing function", "trigger function", or "AC waveform".
- Newly added features of "Sequence Pre-view Dialog" enables you to confirm the waveform before executing the sequence operation.

**Avionics Test Software** 

## SD012-PCR-LE

#### Supported Standards

Military Standard:MIL-STD-704A/E/F Civilian Standard:RTCA DO-160F/G Civilian Standard:JIS W0812:2004

## Supporting to the compliance testing of the avionics test standard. The test pattern can be conducted from the Library.

- Easy configuration just select standard from library
- Test step editing and saving convenient for development and evaluation required with marginal testing
- Test condition reporting function enables test history logging
- Remote control via LAN

Test standards have been established that electrical components and parts installed on aircraft must meet. All electrical components and parts installed on the fuselage must comply with these standards, but the applicable test standards vary according to the intended use and purpose. Test standards can be largely divided into two types: military standards and civilian standards. In addition, aircraft manufacturers sometimes apply their own set of private standards. Avionics Test Software [SD012-PCR-LE] is a software application that support to the aircraft test standards, and is used to control the PCR-LE/LE2 Series that enables you to conduct the test standards for the MIL-STD-704, RTCA/D0-160 and JIS W0812 standards, Test patterns are library-based, which enables tests to be easily run by simply selecting the wiring configuration and the type of test.In general, the 400 Hz AC power supply is used for the large aircraft, and the 28 VDC power supply is used for the small aircraft

## options

Interface boards

\* Any one of the following can be installed. 

\* LE2 indicates the available option for the multi-output models, "PCR-LE2 Series".

GPIB Interface LE2

**IB05-PCR-LE** 

USB Interface LE2

US05-PCR-LE

LAN Interface (LXI) LE2 LN05-PCR-LE

Analog signal interface boards

- \* Any one of the following can be installed.
- \* LE2 indicates the available option for the multi-output models, "PCR-LE2 Series".

EX05-PCR-LE\* (An Amplifier type)

Amplifies the input waveform without changing it. By using this interface board, you can control the PCR-LE with an external contact for (output ON/OFF, sequence start/ stop, alarm clear, forced power OFF) and operation status monitoring (output status, alarm status, busy status, current peak limit and overload status).

Note: If the input waveform will be amplified and used in a multiphase system, one of these interface board is required for each phase.PCR6000LE2 and PCR9000LE2 cannot amplify the input waveform in multi-phase output mode.

**EX06-PCR-LE** (Amplitude control type) LE2

The output AC voltage value can be varied according to the input voltage signal.By using this interface board, you can control the PCR-LE with an external contact for (output ON/OFF, sequence start/stop, alarm clear, forced power OFF) and operation status monitoring (output status, alarm status, busy status, current peak limit and overload status).

**EXT-DC** mode The input waveform is directly amplified and output.

Voltage amplification rate: 100-times

|  | Model       | Output Wirings                     | Required Quantity | PCR-LE Series               | PCR-LE2 Series                |
|--|-------------|------------------------------------|-------------------|-----------------------------|-------------------------------|
|  |             | Single-phase two-wire              | 1                 | PCR-LE Series               | PCR-LE2 Series                |
|  | EX05-PCR-LE | Single-phase three-wire            | 2                 | U-phase,V-phase             | U-phase,V-phase *             |
|  |             | Single-phase three-wire /four-wire | 3                 | U-phase,V-phase,<br>W-phase | U-phase,V-phase,<br>W-phase * |
|  | EX06-PCR-LE | Single-phase two-wire              | 1                 | PCR-LE Series               | PCR-LE2 Series                |
|  |             | Single-phase three-wire            | 1                 | Unbasa                      | II abasa                      |
|  |             | Single-phase three-wire            | 1                 | U-phase                     | U-phase                       |

**EXT-AC** mode

The voltage of the output alternating current can be changed based on the level input DC signal.

Voltage amplification rate: 13.5-times or 27-times

\*The PCR6000LE2 and PCR9000LE2 do not have a feature to amplitude the input waveform in the multiple output mode.

#### Input power cord/Power-sync cable

\* LE2 indicates the available option for the multi-output models, "PCR-LE2 Series".

For PCR1000LE

3-core cabtire cables 5.5 mm<sup>2</sup>/3 m M4

AC5.5-3P3M-M4C

For PCR2000LE

3 single-core cables 8 mm<sup>2</sup>/3 m M5

AC8-1P3M-M5C-3S

For PCR3000LE/PCR6000LE/PCR6000LE2 LE2

3 single-core cables 14 mm<sup>2</sup>/3 m M8

AC14-1P3M-M8C-3S

For PCR4000LE

3 single-core cables 22 mm<sup>2</sup>/3 m M8

AC22-1P3M-M8C-3S

For PCR9000LE/PCR9000LE2 LE2

4 single-core cables 14 mm<sup>2</sup>/3 m M5

AC14-1P3M-M5C-4S

Power-sync cable,1 m

Multiple units of the PCR-LE Series can be connected and turned ON/OFF.

LC01-PCR-LE

\* LE2 indicates the available option for the multi-output models, "PCR-LE2 Series".

Extension cable for control panel LE2

EC05-PCR (cable's length: 2 m)

#### Parallel operation driver

Note: When using this product, a PCR-LE Series unit with firmware version 3.01 or later is required.

If the firmware of your product is 1.X or earlier, modifications and other changes will be required. Please consult with your local distributor. This option cannot be used with PCR500LE or PCR1000LE.

Parallel operation driver (Master)

PD05M-PCR-LE

Parallel operation driver (Slave)

PD05S-PCR-LE

Accessories: Connecting cable (0.7 m), Power signal cable (0.3 m)

#### Extension cable

This extension cable is used if the provided connection cable (0.7 m) or power signal cable is too short when the master unit layout is changed or when connecting different models together.

Extension connection cable (1.3 m) **PC01-PCR-LE** Extension power signal cable (1 m) **CC11-PCR-LE** 

#### ■ Single-phase 3-wire output /Three-phase output driver

\* A single-phase 3-wire output driver and three-phase operation output driver cannot be used in combination.

Note: When using this product, the PCR-LE Series unit with firmware version 2.0 or later is required.

If the firmware of your product is 1.X or earlier, modifications and other changes will be required. Please consult with your local distributor.

Single-phase 3-wire output driver

2P05-PCR-LE

Accessories: Connecting cable (0.75m), Power-sync cable (LC01-PCR-LE, 1 m)

Three-phase output driver/Three-phase output driver (500 Hz limit type)

3P05-PCR-LE/3P05-PCR-LE (500Hz LMT)

Accessories: Connecting cable (0.75 m)×2, Power-sync cable (LC01-PCR-LE, 1 m) ×2

#### Extension cable

This extension cable is used if the provided connection cable (0.75 m) is too short when connecting different models together or when using the parallel operation driver.

Extension connection cable (1.5 m) CC01-PCR-LE Extension connection cable (2.8 m) CC02-PCR-LE

#### Rack mount/Prodout about standard

For PCR500LE Brakets KRB4 (For EIA inch size) KRB200 (For JIS metric size)

For PCR1000LE Brakets KRB6 (For EIA inch size) KRB300 (For JIS metric size)

For PCR2000LE Brakets KRB9 (For EIA inch size) KRB400 (For JIS metric size)

Base holding angle **OP03-KRC** 

## Residual charge measurement **SPEC40414A**

This unit is applied to the residual charge measurement in conformance with the Electric Appliance Safety Law, IEC60950-1, IEC60335-1, IEC60065, and other regulations. It allows residual charge to be measured easily and accurately without unplugging work.

- When the input voltage is 100 V or 200 V, the output voltage is 100 V or 200 V, the output current is the rated value, the load power factor is 1, and the output frequency is between 40 Hz and 999.9 Hz.
- When the output frequency is between 45 Hz and 65 Hz, with no load, and at room temperature.
- When the maximum voltage is between 1 V and 100 V (L range) or 2 V and 200 V (H range) and the load power factor is between 0.8 and 1.
  - When the output voltage is between 100 V and 150 V (L range) or 200 V and 300 V (H range), the output current is reduced by the output voltage. When the load power factor is between 0 and 0.8, the output current is reduced by the load power factor.

When the output frequency is between 1 Hz and 40 Hz, the output current is reduced by the output frequency.

- For capacitor-input rectifier loads (however, this is limited by the rated output current's rms value)
- When the output voltage is 100 V or 200 V and the output frequency is between 40 Hz and 999.9 Hz (reverse current is -180 deg out of phase with the output voltage).
- When the output voltage is between  $100\,\mathrm{V}$  and  $212\,\mathrm{V}$  (L range) or  $200\,\mathrm{V}$  and  $424\,\mathrm{V}$  (H range), the output current is reduced by the output voltage.
- Limited by the rated output current's rms value
- With respect to changes in the rated range
- With respect to 0 % to 100 % changes in the rating
- When the output voltage is between 80 V and 150 V (L range) or 160 V and 300 V (H range) and the load power factor is 1. At the output terminal block. When the response mode is set to FAST or MEDIUM.
- Between 40 Hz and 999.9 Hz.
- When the output voltage is between 80 V and 150 V (L range) or 160 V and 300 V (H range) and the load power factor is 1. This is the output line regulation with 200 Hz as the reference.
- With respect to changes in the rated range
- When the output voltage range is 100 V or 200 V and the output current is 0 A.

  \*14 With respect to changes in all rated ranges
- \*15 When the output voltage is between 80 V and 150 V (L range) or 160 V and 300 V (H range) and the load power factor is 1.
- \*16 When the output voltage is 100 V or 200 V, the load power factor is 1, and the output current changes from 0 A to the rated value and from the rated value to 0 A.
  \*17 When the input voltage is 100 V or 200 V, the output voltage is 100 V or 200 V, the output voltage is 100 V or 200 V, the output treated value, the load power factor is 1, and the output frequency is between 40 Hz and 999.9 Hz. \*18 With the true rms display, a waveform with a crest factor of 3 or less, DC, output frequency between 40 Hz and 999.9 Hz, RMS, and AVE.
- \*19 When the output frequency is between 45 Hz and 65 Hz.

- Although signals are insulated with output terminals, each signal is common. Logic setting is also possible.

  The frequency is limited to the range from 1 Hz to 500.0 Hz when the 3P05-PCR-LE(500HZ LMT) is installed in the PCR-LE series.

  The current that can actually be supplied is 1.1 times the rated current or the current limit, whichever is less.

  The current that can actually be supplied is the maximum peak current or the current limit, whichever is less.

  You can set the current in 0.10 I/O.1 A steps, but it may not change at this resolution depending on the relationship with the internal D/A resolution.
- Does not apply to specially ordered or modified PCR-LEs.
- Only on models that have the CE marking on the panel.

  This is a Class A equipment. This product is intended for use in an industrial environment.
- This product may cause interference if used in residential areas. Such use must be avoided unless the user takes special measures to reduce electromagnetic emissions to prevent interference to the reception of radio and television broadcasts.
- This is a Group 1 equipment. This product does not generate and/or use intentionally radio-frequency energy, in the form of electromagnetic radiation, inductive and/or capacitive coupling, for the treatment of material or inspection/analysis purpose.
- \*10 PCR500LE、PCR1000LE、PCR2000LE only.
- \*11 This is a Class I equipment. Be sure to ground this product's protective conductor terminal. The safety of this product is only guaranteed when the product is properly grounded.

## Output single-phase, single-phase 3-wire, Convenient multiple output supports a wide AC power supply offering superior space factor

## **High-performance AC Power Supplies PCR-LE2 SERIES**

The PCR-LE2 Series are designed based on the PCR-LE Series that supports single-phase output, single-phase 3-wire output, and three-phase output within the rated capacity by selecting the switch from the front panel operation. The PCR-LE2 series offer the same basic performance, using the common power unit of the PCR-LE Series, with providing easier installation and saving the space more

efficiently compare to the individual allocation of the system for a singlephase, single-phase 3-wire, and threephase systems. The lineup of PCR-LE2 Series are available in 3 models: 6 kVA, 9 kVA, 12 kVA, 18 kVA, and

Single-phase output display screen

- When the output phase voltage is 100 V or 200 V, the output current is the rated value, the load power factor is 1, and the output frequency is between 40 Hz and 999.9 Hz.
- L/H range can be changed by means of a switch on the front panel. Resolution: 0.1V
  When the output frequency is between 45 Hz and 65 Hz, with no load, and at room temperature.
- When the maximum voltage is between 1 V and 100 V (L range) or 2 V and 200 V (H range) and the load power factor is between 0.8 and 1.When the output phase voltage is between 100 V and 150 V or 200 V and 300 V (AC mode) or 100 V and 212 V or 200 V and 424 V (DC mode), the output current is reduced by the output phase voltage.

  When the load power factor is between 0 and 0.8, the output current is reduced by the load power factor. (AC mode)
- When the output frequency is between 1 Hz and 40 Hz, the output current is reduced by the output frequency. (AC mode) The output phase mode can be changed by means of a key on the operation panel. "Poly" in the table indicates single-
- phase three-wire mode and three-phase four-wire mode.

  When the output phase voltage is in the vicinity of the peak (±15 deg) (However, this is limited by the rated output current's rms value).

  When the output phase voltage is 100 V or 200 V and the output frequency is between 40 Hz and 999.9 Hz (reverse current
- is –90 deg to –180 deg / 90 deg to 180 deg out of phase with the output voltage).

  Resolution: 0.01Hz(1.00 Hz~100.0 Hz), 0.1Hz(100.0 Hz~999.9 Hz)
- The "500Hz Limit Model" limits the maximum frequency up to 500Hz under the "Three-phase output".
- With no load at room temperature
- Limited by the rated output current's rms value

  When the output phase voltage is between 80 V and 150 V (L range) or 160 V and 300 V (H range) and the load power factor is 1. At the output terminal block. When the response mode is set to MEDIUM.(There is no F mode)

- When the output phase voltage is between  $80\,\text{V}$  and  $150\,\text{V}$  (L range) or  $160\,\text{V}$  and  $300\,\text{V}$  (H range) and the load power factor is 1. This is the output line regulation with  $200\,\text{Hz}$  as the reference. When the response mode is set to MEDIUM. (There is no F mode)
- When the output phase voltage is 100 V or 200 V and the output current is 0 A
- When the output phase voltage is between 80 V and 150 V (L range) or 160 V and 300 V (H range) and the load power factor is 1. When the response mode is set to MEDIUM.(There is no F mode)
- When the output phase voltage is 100 V or 200 V, the load power factor is 1, and the output current changes from 0 A to the rated value and from the rated value to 0 A.
- $Phase\ difference\ between\ output\ voltages\ (phase\ voltages)\ when\ each\ phase\ is\ considered\ along\ with\ the\ neutral$
- point.

  The following show the angles obtained by calculating the expression with the specified frequency. When phase difference is 120 deg.
  Within 120 ± 0.5 deg(when generating 60 Hz output)
- Within  $120 \pm 1.2$  deg(when generating 400 Hz output) With the true rms display, a waveform with a crest factor of 3 or less. When the output frequency is between 45 Hz and 65 Hz.
- Displays the output frequency setting (frequency of the internal reference voltage)

#### ★ PCR-LE2 Series 500Hz Limit Model

The PCR-LE Series offers the type on each model that limits the maximum output frequency up to 500 Hz.

<sup>\*1</sup> The current that can actually be supplied is 1.1 times the rated current or the current limit, whichever is less.
\*2 The current that can actually be supplied is the maximum peak current or the current limit, whichever is less.
\*3 You can set the current in 0.01 A/ 0.1 A/ 1 A steps, but it may not change at this resolution depending on the relationship with the internal D/A resolution.

## common specifications

#### Rated output current characteristics (Derating)

The output voltage ratio is a percentage where 100 % represents an output voltage of 100 V (output L range) or 200 V (output H range) in AC mode or DC mode.

The output current ratio is a percentage where 100 % represents the maximum rated output current in AC mode or DC mode.

 Output voltage ratio versus rated output current characteristics (AC mode)

 Load power factor versus rated output current characteristics

 Output voltage ratio versus rated output current characteristics (DC mode)

 Output frequency versus rated output current characteristics

For the "Output voltage ratio versus rated output current characteristics (AC mode)" and "Load power factor versus rated output current characteristics" graphs, the rated output current is the product of the output current ratios shown in both graphs. The output current ratio shown in the "Output frequency versus rated output current characteristics" graph is given priority if it is less than the product of the output current ratios described above. (This only applies to AC mode.)

# High-performance multifunctional PCR-LE/ LE2 SERIES SELECTION

■ Extended system for large capacity applications. Flexible configuration in models.

# AC Power Supplies GUIDE

#### New stage of AC power supply supporting new energy field

The PCR-LE Series is a high performance and multifunctional AC power supply. It can be used as a high quality and stability of the regulated power supply and it controls the waveform freely of the broadband frequency by taking the advantage characteristics of the linear amplifier method. Furthermore, it supports the low frequency immunity test and various power environment tests combined with various options. The options are available for the Parallel Operation, Single-phase Three-wires Operation, and Three-phase Operation that enables you to expand the system for the Single-phase Operation up to 27kVA, Single-phase Three-wires Operation up to 54kVA, and Three-phase Operation up to 81kVA for which systems can be applied to the large-scale EMC testing site. The PCR-LE Series are available in total of 7 models for 0.5kVA, 1kVA, 2kVA, 3kVA, 4kVA, 6kVA, and 9kVA model.

The PCR-LE2 Series are designed based on the PCR-LE Series that supports single-phase output, single-phase 3-wire output \*, and three-phase output within the rated capacity by selecting the switch from the front panel operation. The PCR-LE2 series offer the same basic performance, using the common power unit of the PCR-LE Series, with providing easier installation and saving the space more efficiently compare to the individual allocation of the system for a single-phase, single-phase 3-wire, and three-phase systems. The lineup of PCR-LE2 Series are available in 3 models: 6 kVA, 9 kVA, 12 kVA, 18 kVA, and 27 kVA model.

\*2/3 of the rated output power

#### **PCR-LE Series**

Applied to 108kVA, 135kVA!

\*Subject to the costom products

- ■High-quality/high-stability output with a high-speed linear amp
- ■Capable of various power line abnormality simulations and the sequence operation
- ■Single phase 500 VA to 9 kVA, supporting the system for the single-phase, and expandable with optional drivers for the single-phase three-wire, and three-phase operation
- ■Expandable capacity up to 27 kVA (single-phase), 54 kVA (single-phase three-wires), and 81 kVA (three-phase)
- ■Equipped with various measuring functions
- ■Features a full range of measuring functions and supports AC, DC, and AC + DC Outputs
- ■Detachable front panel
- ■Eco-friendly function equipped

#### **PCR-LE2 Series**

- ■High-quality/high-stability output with a high-speed linear amp
- ■Capable of various power line abnormality simulations and the sequence operation
- ■Single-phase 6 kVA to 27 kVA, Capable of the Single-phase output, Single-phase 3-wire output, and Three-phase output.
- ■Equipped with various measuring functions
- ■Features a full range of measuring functions and supports AC, DC, and AC + DC Outputs
- ■Detachable front panel
- ■Eco-friendly function equipped
